

How do I apply parcel stickers correctly?

1. The minimum size of the package must be such that the sticker can fit on one of its sides. The dimensions of the sticker shall be 10 cm x 18 cm. The sticker must be attached in its entirety, with all the information provided (the letter on the parcel sticker is essential and must not be cut off).

2. Only print your stickers using a high-quality printer. Do not print stickers if the printer is out of ink, and do not use too high resolution to prevent the barcode from sticking together.

- 3. The sticker is only attached to the top of the packaging. If the sticker is placed on the side, the package will need to be turned over before scanning so that the sticker is on the top.

- 4. Stickers must be applied directly to the flat surface of the packaging - do not bend or wrinkle the sticker as it will not be possible to read the barcode.

- 5. Only one sticker must be placed on the packaging. It is not enough to scratch the old stickers with a pen or otherwise damage them - they must be peeled off.
